Our Solution.
Your Industry.

Compliance

What are the legal requirements that matter to you? That answer varies by industry. This is why we've created industry-specific compliance profiles that provide both system configuration enforcement and code-level detection of unauthorized changes.

HIPAA

The Health Insurance Portability and accountability Act (HIPAA) of 1996, requires healthcare providers who transfer documents online or maintain electronic records to adhere to a specific set of requirements intended to secure patient privacy. Many healthcare providers are looking for a way to formalize their approach to HIPAA compliance in order to communicate the value they place on privacy to their trusting patients, as well as prepare for potential audits.

Automation

HIPAA compliance lays the groundwork for trust in the patient/provider relationship. HIPAA regulations are based on industry-accepted best practices for infrastructure security. The **SIMP + HEALTH** profile provides a turn-key approach to automate these practices. As the **SIMP** project grows, you gain improvements based on security reviews, not only from your industry, but from all covered industries, resulting in lasting benefit to your business.

SIMP + HEALTH Compliance Profiles

HIPAA Benefits

Risk Management

Security practices are an essential component of HIPAA regulations. Our security specialists have configured a turn-key solution that will help you automatically mitigate risk. Effective automation with SIMP can help reduce losses due to misconfigured systems, system breaches, and failed audits.

Improved Efficiency & Flexibility

SIMP has been designed so that multiple requirement bodies can be satisfied on a single automation framework. This provides consistency and flexibility for enterprises governed by several standards.

Business Continuity

Built on leading automation technologies, SIMP has been designed to automate compliance and system functionality. Your team can use the same tested framework to transition critical business functions into reliable reusable components.
